

Setup (2p/3p/4p/5p)

- \$8,000 bank
- Starting cash: \$600/\$400/\$300/\$240
- Certificate Limit: 27/18/13/10
- Place Preferred Shares in each corporation except B&O. Place the eight non-President's Certificates in the B&O treasury.

Private Corporations

- Private company auction
 - Players take turns making bids in \$5 increments (minimum is face value) until all players pass. If an item remains with no bids, reduce the price of it by \$10, then resume the auction.
 - Once all private corporations have bids, the highest bidder for each one wins that company and pays their bid.
- Private corporations can be sold to railroads from 1/2 to 1-1/2 their face value starting in Phase 3.
- Private corporations remain with the corporation until the special power is used.
 - P1 (\$40/\$10): Adds +10 to any city (including off-boards) for the owning corporation, permanently and exclusively.
 - P2 (\$60/\$15): Deducts \$200 from the purchase of any new train from the bank.
 - P3 (\$80/\$20): Choose between a free and non-blocking extra station token anywhere on the map or +1 to the corporation's train limit.
 - B&O President's Certificate is also auctioned off with these three privates (set par when purchased). The face value is \$140.
- Reseat in descending cash order after this auction (tied players retain relative seating) and give Priority to the player with the most cash.

Stock Round

- Always sell then buy.
- Share price drops one space for each share sold.
- Players may not sell multiple shares of a single corporation's stock as multiple transactions in one turn.
- Players may not sell shares of a corporation that has not operated.
- 50% stock limit per corporation in the Bank Pool.
- A player can own up to 60% of the corporation's stock (i.e three shares of a Five-Share corporation).
- Always pay current market value for shares. When a player buys a share from the corporation's treasury, cash is paid to the corporation. If it is bought from the Bank Pool, pay the bank.

Public Corporations

- All corporations except B&O start as Five-Share corporations (40% president's certificate plus three 20% certificates).
- Opening values are 70/75/82/90/100.
- Only one extra token in Five-Share corporations until they convert to Ten-Share corporations.
- Corporations open immediately with the sale of the President's Certificate, (other shares go in the corporation's treasury).
- Corporations that start after the purchase of the first 5-train start as Ten-Share corporations and the sixth share capitalizes the corporation for five times the Current Market Value. Place the remaining four shares in the Pool.

Five-Share to Ten-Share Transformation

- President chooses to convert at the beginning of a corporation's operating turn.
- May not be done before the start of Phase 3.
- Transformation is compulsory and immediate for all corporations upon the start of Phase 5.

Operations

- May only upgrade city tiles if the upgrade extends or increases the earnings of a legal route for the operating corporation.
- Disallowed to build/upgrade track that prevents a corporation from running a route.
- Ports
 - Corporations with a token in the port city (adjacent to anchor port symbol) are eligible for the port bonus.
 - Ports give a bonus and do not count against the train number, but a route from port city to port is not a legal route.
 - If a corporation runs a G-train and reaches the port, the total value of the city (including the port bonus) is doubled.
- Coal Mining Districts (CMD) and Mines
 - CMDs can only be reached by G-trains, and do not count against the train's number.
 - No token in the CMD? Add table value to the revenue.
 - Token in CMD? Add table value to both the revenue and the corporation's treasury (this corporation treasury dividend stops once Phase 4D begins).
 - Mountains can only be built with dot-town tracks (mines).
 - Mines (the dot-town track hexes) do not count against a train's range, but only G-trains count the revenue.
- Off-Map Cities pay double if the corporation has a token in them.
- No running port to port, Off-Map City to Off-Map City or CMD to CMD.
- Corporation runs must maximize earnings.
 - Share price only moves right if the dividend paid is greater than or equal to the Current Market Value.
 - Shares in the Pool pay dividends to the corporation. Shares in corporation treasury do not pay.

- Emergency Money Raising only if the corporation does not have enough money to buy a train from the Bank or Pool.
 - President makes up the difference from his own cash to allow the Corporation to buy the cheapest available train.
 - Must sell stock if the president does not have enough cash.
 - May not sell unoperated corporations.
 - May not violate 50% shares in the Bank Pool.
 - May not change the presidency of the operating corporation.
 - An entirely moneyless corporation can buy a train from another corporation: the president can contribute from his money up to the purchased train's face value (but cannot sell stock to do so).
 - During these forced train purchases, the president can end up selling shares that can cause a change of presidency in other corporations.
- Train buying
 - Two kinds of trains: regular ("number") trains and mine ("G") trains. President chooses which type is purchased.
 - 5/4G-trains scrap the 3/2G-trains.
 - 4D-trains are available upon the purchase of the first 6/5G-train.
 - May only buy a second train from the bank in the same operating round if it is a different level (thus there is a maximum of two trains from the bank per turn).
 - Five-Share corporations' train limit goes from two to one in Phase 4. Ten-Share corporations follow normal train limits.

Bankruptcy

- Does not end the game, but the bankrupt player is eliminated.
- Bankrupt player's stock is placed at the pool (ignore 50% limit), private corporations are discarded, presidencies are transferred to the next eligible player. If there is no eligible player, the corporation is closed (see 4.6.3).
- If the presidency is transferred, the corporation is transferred with the money raised during this emergency money raising.

Game End

- Bank breaks in OR? Finish OR set.
- Bank breaks in SR? Play an additional set of ORs.
- All but one player are bankrupt? Remaining player wins.
- Count face value of the private corporations still owned by the players in the final player value.
